

DeFi of the cities around the world

CitySwap is a decentralized exchange(DEX) consisting of automated market making(AMM) pools for exchanging ERC-20 tokens on Ethereum. Unlike CEX(Centralized crypto exchanges), DEX enables real-time decentralized transactions through immediate value exchange within the liquidity pool already supplied from providers.

How it works

Prices are determined by the amount of each token in a pool defined by a smart contract. For each trade a certain amount of tokens are removed from the pool for an amount of the other token. And when users make a trade on the exchange they pay a 0.3% trade fee. Collected fees are allocated to the reserve of the pool. Once the protocol switch is turned on, CityToken holders will collect 0.05% of each swap, while LPs' reward will decrease to 0.25%. When the Liquidity Providers farm certain tokens with CLP token, **10% of the foundation's share is distributed to the CityToken holders according to their share ratio.**

CitySwap's token economy consists of City Token(CT) and Metropolis Tokens(MT) to support its Defi Yield Farming. MT names were chosen after 30 major cities such as Beijing, Seoul, Singapore, etc, where the cryptocurrency industry has thrived. CT is the main and governance token of the CitySwap project and will maximize the value of MTs. These components of the ecosystem along with CitySwap's own decentralized exchange will create a healthy token ecosystem and play a crucial part in a sound Yield Farming system.

Team

We build own DeFi ecosystem by expanding the scope of Money Market (CityCredit), Payments (CityPay), Futures Trading (CityFutures), and FX margin Trading (CityForex).

Allocation

The total volume of CityToken is 6,841 million
It has been minted at genesis and will become accessible over the course of 10 years.
The final allocation is as follows
